EXAMINER'S COMMENT

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Patent No. US 6,671,426 B2 to Litvin discloses an optical device comprising two closed-loop resonators 210/225 and an optical coupler structure 215/245. It is noted, however, that the Litvin patent does not disclose that the optical coupler structure 215/245 comprises first and second waveguides as recited by independent claim 2. This is because the optical coupler structure of Litvin operates in a substantially different manner from the claimed invention. For example, Litvin does not disclose directing selected light to pass through a filter structure in opposite directions along two optical paths of the same length so as to return back into the gain section as recited by independent claim 19. This is because the gain section 220 in Litvin is part of the coupler structure 215 itself. Thus, the present claims are deemed allowable over Litvin.
